

### **---PLEASE READ EVERYTHING---**

This text includes steps on how to correctly set up the Automatic Course Registration for UT Austin and how it works in order for you to understand the risks

The program takes control of your mouse and keyboard in order to press the required buttons and type the classes into the registration page. The images in these files are used to detect these buttons.

- Do not move, remove, edit, or rename the images (or any files of that matter)
- Be sure that your web browser is full-screen in order to avoid obstructing any of these buttons
- Do not touch your mouse or press your keyboard when the program begins
- There will be a 1-second delay between each class submission, so be sure to have a good internet connection so the page refreshes before the delay
- If the program does fail, be ready to press CTRL, which will immediately end the program
- We will discuss other risks and advice below

### **---SETTING THE TIME---**

The txt file labeled "Courses" will be how the program sees which classes to input. Upon opening, the first line reads: "/Registration Time"

Do not edit it. You will notice the slash. You will notice the other slashes. Do not remove them. This is how the program knows what it should do next.

Underneath "/Registration Time" COMPLETELY REPLACE each line with the time your registration opens. For example, if registration opened on June 16 2024 at 1:30 pm, the text would look like this:

```
/Registration Time  
2024  
6  
16  
13  
30  
0  
/
```

You have finished setting the time at which the program will begin to run.

### **---SETTING COURSES---**

Below you will see multiple of the same blocks of code. They will be how your program will know which classes you would like to take.

But most importantly, you should have multiple classes ready for one course. For each course, type a FORWARD slash and the course name (the name doesn't have to be in any format). Underneath each slash, paste your class codes for the course, each code on its own line. The most desired should be on top.

IMPORTANT :: If you have a FIG, please put it FIRST

If you have a FIG, want to take 1 VAPA, and need your UGS, the text would look like this:

```
/FIG  
123456
```

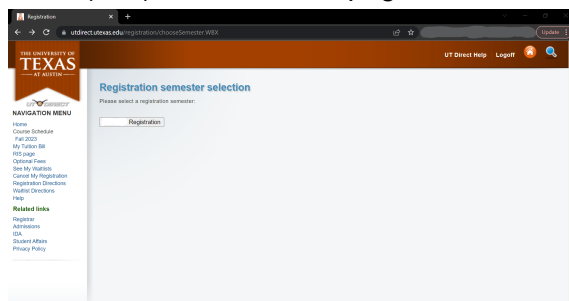

```
/VAPA  
33965  
29990
```

```
/UGS  
62425  
64090  
64290  
64295  
64305
```

### ---RUNNING THE PROGRAM---

Congratulations! You've finally completed setting up the data for the Automatic Course Registration! Follow the steps below to initiate the program:

- Using your own method (running through VScode or through Windows CMD), execute the Python file named "Registration".
- Go into your web browser and login into your UT account. Access the registration information sheet (RIS) and reach the page that looks like this:

- Make sure this page is full screen or at least large enough.
- Leave your laptop on this page and leave the Python program running in the background.

- Be ready to press CTRL in case of an emergency
- Watch your Python program enter your courses for you! Good luck in college!
